

## Examiner's report

### CTSI Professional Competency Framework

#### Stage 2: Weights and Measures Reflective Statement Examiner's Report May 2022

##### General

Overall, there was a better standard this year, of scripts which met the requirements for a reflection on the candidates' abilities and performances when conducting metrological interventions. Candidates are reminded that there is no prescribed format for completing the reflective statement as it is a report about their own performance(s) and therefore is very personal to them.

There are still instances of critiquing those around them or system failures but this is not the objective, it is to evaluate their own performance. The candidate may encounter im-pediments to a rewarding learning experience but these in themselves need to be over-come so some form of mitigation is needed to overcome those and the candidate could detail the mitigation that they had to apply.

This year again there was very little variety in the equipment type encountered and written about to reflect upon the performance of the candidate. Whether this is done for ease of writing or depicts a lack of variety when conducting interventions. It would be nice to see some Packaged Goods or Automatic Weighing Instruments write ups as these will test the mettle of any candidate.
