

Supporting learning and development for Product Safety and Legal Metrology

Introduction

The product safety and legal metrology regulatory system must adapt to meet evolving challenges – responding to expanding international trade, the growth in online retail and the increasing rate of product innovation. It is essential that local authority practitioners have the knowledge and skills to meet the challenges of changing markets and technology – enabling them to work effectively with business to build consumer confidence in the market place.

Competence and capability is a key thread running through the Regulators' Code – there is an expectation that regulators are both technically competent but also able to work with business, leading approaches to compliance.

With this in mind, to support the activities and responsibilities of local authorities and their practitioners, the Office for Product Safety and Standards continues to work in partnership with CTSI who will administer and deliver Product Safety and Legal Metrology training **to local authority practitioners**.

Following an analysis of current learning and development provision and consultation with local authorities and practitioners, a seminar and series of workshops will be taking place in 2020. These learning and development opportunities will be offered on a free to attend basis. CTSI will be overseeing the professional and administrative aspects of the programme.

Product Safety Training Programme

Safety of Electrical Second-hand Products

To provide delegates with improved knowledge and practical skills in relation to electrical product safety, particularly in relation to the inspection of second-hand electrical product. Learn why this area is of particular importance now.

Legal Metrology Training Programme

Packaged Goods Training

CTSI are working with OPSS to provide packaged goods training in March and April 2020 and would like to hear from local authorities who are interested in hosting an event in their local area and know of a packer who may be willing to host a visit as part of this training

This is a refresher course covering all aspects of the Packaged Goods requirements and will use documents prepared for the Project PGR 2019. These documents look at each activity involved in ensuring compliance and consists of a check list and guidance, and will be refined as necessary.

Where possible the training will take **place at packer's** premises so that practical assessment of **automatic** checkweighers and examination of records can be used.

Legal Metrology Training Programme

Legal Metrology and Product Safety Seminar – Scotland

The seminar will provide an overview of developments in the product safety and legal metrology landscape. This will provide local authority attendees with an opportunity to hear from the Office for Product Safety and Standards on policy, legislative, scientific and technical developments – including the Weights & Measures Strategy and the resources available to support local enforcement. In addition, Legal Metrology and Product Safety training sessions will be run in the morning and again in the afternoon (depending on numbers) to update technical knowledge and skills for local authority practitioners.
